Software Version 6.0

SIMStation Software UI

SIMStation

2 Screen Mode

The application can be configured for standard PCs with 2 monitors or one ultra-wide monitor to fill the entire desktop area.

This provides a lot of space for the videos and allows a reasonable integration of up to 9 video streams.

The freely selectable and placeable tool panels can be arranged according to your needs.

2 Screen Mode OSCE

Integrated video streams can be adjusted to the size of a screen.

The video recording function is separated from the OSCE player function, which enables a fully automated course solution — with or without video recording.

The individual session runs are displayed graphically on a timeline and provide a quick overview of the course of the OSCE.

Two additional features that are included:
Clinical Vignette for transmission to door screens and electronic registration/login of students at door screens.

Release: end of 2022.
